

Motivated and ready to face the challenges in 2020!

The Munich Sales Team met on the first weekend of February to discuss the most important topics concerning our products, services and customers' needs. An intensive exchange of ideas with strategic planning in view of the constantly growing challenges in our sector took place in a beautiful and relaxed environment. We will continue to optimise our delivery and service performance in order to fully satisfy our customers also in 2020. We are consistently expanding our product portfolio and investing in the latest technology at our production site in Leutershausen as well as at our trading site in Ötisheim.

Ecoline Scantling NO LIMITS

Individual solutions need strong partners.

In order to be able to meet the demands of architects, planners and fabricators in the commercial and residential building sector more flexibly, sustainably and economically in the future, we offer our ecological NO LIMITS Scantling as a solution. This product satisfies all current requirements of the modern windows, doors and facade industry.

- Quality:

the barely visible finger-joints are reduced to the unavoidable minimum and only slightly affect the homogeneous look of the surfaces.

- Ecology:

the natural material wood, with all its positive characteristics and special features, is taken into account and we can guarantee a sustainable supply today and also in the future.

- Procurement and planning reliability:

the product can be delivered at short notice, regardless of the season, raw material situation and the conditions in the round timber market and we offer a very good price-performance ratio.
